QUESTION 1

```
=====
```

Question:

What is the main objective of the study?

Evaluating Faithfulness...

Faithfulness: MetricResult(value=1.0)

Evaluating Answer Relevancy...

Answer Relevancy: MetricResult(value=0.9710418788637446)

Evaluating Context Precision...

Context Precision: MetricResult(value=0.9999999999)

Evaluating Context Recall...

Context Recall: MetricResult(value=1.0)

=====

QUESTION 2

=====

Question:

What does RFQ stand for, and what percentage of RFQs historically resulted in a sale?

Evaluating Faithfulness...

Faithfulness: MetricResult(value=1.0)

Evaluating Answer Relevancy...

Answer Relevancy: MetricResult(value=0.9747943062656824)

Evaluating Context Precision...

Context Precision: MetricResult(value=0.9999999999)

Evaluating Context Recall...

Context Recall: MetricResult(value=1.0)

=====

QUESTION 3

=====

Question:

Which machine learning model was selected as the final model?

Evaluating Faithfulness...

Faithfulness: MetricResult(value=0.0)

Evaluating Answer Relevancy...

Answer Relevancy: MetricResult(value=0.6811243120668129)

Evaluating Context Precision...

Context Precision: MetricResult(value=0.0)

Evaluating Context Recall...

Context Recall: MetricResult(value=0.0)

=====

QUESTION 4

=====

Question:

Why is the prediction problem considered an imbalanced classification problem?

Evaluating Faithfulness...

Faithfulness: MetricResult(value=1.0)

Evaluating Answer Relevancy...

Answer Relevancy: MetricResult(value=0.0)

Evaluating Context Precision...

Context Precision: MetricResult(value=0.9999999999)

Evaluating Context Recall...

Context Recall: MetricResult(value=1.0)

=====

QUESTION 5

=====

Question:

What techniques were investigated to deal with class imbalance

Evaluating Faithfulness...

Faithfulness: MetricResult(value=0.0)

Evaluating Answer Relevancy...

Answer Relevancy: MetricResult(value=0.9725854431465484)

Evaluating Context Precision...

Context Precision: MetricResult(value=0.9999999999)

Evaluating Context Recall...

Context Recall: MetricResult(value=1.0)

=====

QUESTION 6

=====

Question:

Name three important features used by the final model.

Evaluating Faithfulness...

Faithfulness: MetricResult(value=0.0)

Evaluating Answer Relevancy...

Answer Relevancy: MetricResult(value=0.9692071651670666)

Evaluating Context Precision...

Context Precision: MetricResult(value=0.9999999999)

Evaluating Context Recall...

Context Recall: MetricResult(value=1.0)

=====

QUESTION 7

=====

Question:

Why could Quote features not be used as input features for the prediction model?

Evaluating Faithfulness...

Faithfulness: MetricResult(value=1.0)

Evaluating Answer Relevancy...

Answer Relevancy: MetricResult(value=0.0)

Evaluating Context Precision...

Context Precision: MetricResult(value=0.9999999999)

Evaluating Context Recall...

Context Recall: MetricResult(value=1.0)

=====

QUESTION 8

=====

Question:

Why were RFQs with all customer and part source features missing removed from the dataset?

Evaluating Faithfulness...

Faithfulness: MetricResult(value=1.0)

Evaluating Answer Relevancy...

Answer Relevancy: MetricResult(value=0.9881552708409197)

Evaluating Context Precision...

Context Precision: MetricResult(value=0.9999999999)

Evaluating Context Recall...

Context Recall: MetricResult(value=1.0)

=====

QUESTION 9

=====

Question:

Why was the classification threshold changed from 0.5 to 0.62?

Evaluating Faithfulness...

Faithfulness: MetricResult(value=0.0)

Evaluating Answer Relevancy...

Answer Relevancy: MetricResult(value=0.779140865246013)

Evaluating Context Precision...

Context Precision: MetricResult(value=0.9999999999)

Evaluating Context Recall...

Context Recall: MetricResult(value=1.0)

=====

QUESTION 10

=====

Question:

How does this approach differ from traditional spare-parts demand forecasting?

Evaluating Faithfulness...

Faithfulness: MetricResult(value=0.0)

Evaluating Answer Relevancy...

Answer Relevancy: MetricResult(value=0.0)

Evaluating Context Precision...

Context Precision: MetricResult(value=0.9999999999)

Evaluating Context Recall...

Context Recall: MetricResult(value=1.0)

=====

FINAL RESULTS

=====

Question 1

Faithfulness : MetricResult(value=1.0)

Answer Relevancy : MetricResult(value=0.9710418788637446)

Context Precision : MetricResult(value=0.9999999999)

Context Recall : MetricResult(value=1.0)

Question 2

Faithfulness : MetricResult(value=1.0)

Answer Relevancy : MetricResult(value=0.9747943062656824)

Context Precision : MetricResult(value=0.9999999999)

Context Recall : MetricResult(value=1.0)

Question 3

Faithfulness : MetricResult(value=0.0)

Answer Relevancy : MetricResult(value=0.6811243120668129)

Context Precision : MetricResult(value=0.0)

Context Recall : MetricResult(value=0.0)

Question 4

Faithfulness : MetricResult(value=1.0)

Answer Relevancy : MetricResult(value=0.0)

Context Precision : MetricResult(value=0.9999999999)

Context Recall : MetricResult(value=1.0)

Question 5

Faithfulness : MetricResult(value=0.0)

Answer Relevancy : MetricResult(value=0.9725854431465484)

Context Precision : MetricResult(value=0.9999999999)

Context Recall : MetricResult(value=1.0)

Question 6

Faithfulness : MetricResult(value=0.0)

Answer Relevancy : MetricResult(value=0.9692071651670666)

Context Precision : MetricResult(value=0.9999999999)

Context Recall : MetricResult(value=1.0)

Question 7

Faithfulness : MetricResult(value=1.0)

Answer Relevancy : MetricResult(value=0.0)

Context Precision : MetricResult(value=0.9999999999)

Context Recall : MetricResult(value=1.0)

Question 8

Faithfulness : MetricResult(value=1.0)

Answer Relevancy : MetricResult(value=0.9881552708409197)

Context Precision : MetricResult(value=0.9999999999)

Context Recall : MetricResult(value=1.0)

Question 9

Faithfulness : MetricResult(value=0.0)

Answer Relevancy : MetricResult(value=0.779140865246013)

Context Precision : MetricResult(value=0.9999999999)

Context Recall : MetricResult(value=1.0)

Question 10

Faithfulness : MetricResult(value=0.0)

Answer Relevancy : MetricResult(value=0.0)

Context Precision : MetricResult(value=0.9999999999)

Context Recall : MetricResult(value=1.0)
